

CECILIA2050: take it away!

Heleen de Coninck
Radboud University / Climate Strategies

Renewable energy: from marginal to mainstream

Seven requirements:

1. A public movement that provides political mandate
2. Favourable government-industrial system
3. Balancing sustainability, resource efficiency and circular economy
4. Grids and electricity markets have to accommodate large amount of renewables
5. Financing for infrastructure and renewable energy
6. Efficient, inclusive and fair permitting
7. Policy framework

CARISMA project: linking mitigation actions with innovation

- CARISMA: Coordination and Assessment of Research and Innovation in Support of climate Mitigation Actions
- Trying to better link climate mitigation and innovation policy in the EU
 - Innovation in EU and technologies and practices in markets with growing emissions
 - Exploring governance and policy challenges and inspiring examples
 - Quantitative and qualitative assessment of new technologies and actions
- Learning from CECILIA2050 (and other (FP7/H2020) projects) and building on its results
- Adding on those projects by focussing ourselves on stories, cases, narratives, conversations with practice

Thank you

Let me know if you want to become involved in CARISMA:
